

06 – Project Testing

Client Script & UI Policy in ServiceNow Incident Management

Technology Track	ServiceNow Administrator
Platform	ServiceNow
Module	Incident Management
Testing Scope	Client Script, UI Policy and Incident form behaviour

1. Testing Objective

The objective of testing is to verify that the configured Client Script and UI Policy produce the expected dynamic behaviour on the ServiceNow Incident form when the relevant conditions are applied.

2. Testing Approach

- Open the Incident form and verify the initial field state.
- Change the field value used by the configured condition.
- Observe whether the Client Script executes as configured.
- Observe whether the UI Policy applies its configured field properties.
- Verify the resulting Incident form behaviour.
- Record the actual result and capture supporting screenshots.

3. Test Cases

Test ID	Test Scenario	Expected Result	Status
TC01	Open Incident form	Incident form loads correctly	To Verify
TC02	Check initial field behaviour	Fields show their configured initial state	To Verify
TC03	Change relevant condition field	Configured condition is evaluated	To Verify
TC04	Verify Client Script behaviour	Configured client-side behaviour is applied	To Verify
TC05	Verify UI Policy behaviour	Configured field properties are applied	To Verify
TC06	Check resulting field state	Relevant fields show expected behaviour	To Verify
TC07	Test condition not satisfied	Field behaviour remains according to default/non-triggered configuration	To Verify
TC08	Repeat applicable condition	Behaviour remains consistent	To Verify
TC09	Capture final output	Final result is documented with screenshot	To Verify

4. Test Execution Record

Test ID	Actual Result	Pass / Fail	Evidence
TC01	To be recorded during execution	—	Screenshot
TC02	To be recorded during execution	—	Screenshot
TC03	To be recorded during execution	—	Screenshot
TC04	To be recorded during execution	—	Screenshot
TC05	To be recorded during execution	—	Screenshot
TC06	To be recorded during execution	—	Screenshot
TC07	To be recorded during execution	—	Screenshot

TC08	To be recorded during execution	—	Screenshot
TC09	To be recorded during execution	—	Screenshot

5. Testing Evidence

- Incident form initial state screenshot.
- Client Script configuration screenshot.
- UI Policy configuration screenshot.
- Condition-triggered Incident form screenshot.
- Final output / validation screenshot.

6. Defect Recording

If an observed result does not match the configured requirement, record the issue, affected component, observed behaviour, expected behaviour and corrective action before marking the test as passed.

7. Testing Result

The final Pass/Fail status should be completed after executing the test cases in the actual ServiceNow instance. This document intentionally does not claim test results before execution.

8. Team Members

Role	Name
Team Leader	M Manisha
Member	M Monisha
Member	E Pattu Devi
Member	S Selva Abi
